- Up to 8000 Control Channels/Attributes
- Show file compatibility with all 300 and 500 series consoles

## Introduction

At last, the next generation of Light Palette consoles has arrived. Based on our powerful Palette OS with its direct action point and click graphical interface these new consoles offer control to meet productions of any size. Systems are available from 1500 to 8000 channels with over 32,000 DMX outputs providing exceptional range and control.

Light Palette has a powerful web browser that lets you configure and monitor your network and interact directly with Strand's award-winning C21 and EC21 dim-

ming systems. Right there on the console screen. And Light Palette is an elegant and highly functional lighting console, leveraging industry-standard technologies making it easy to communicate with other cool products (and not just ours) over the network. Whether you want to visualize your show with WYSIWYG or run a PowerPoint projection Light Palette connects quickly and easily.

And Palette's brain is a rugged industrial PC with a powerful Dual Core processor that could be swapped in seconds if you

ever needed to. Which you most likely wouldn't. Palette has an 80 gigabyte hard drive, or you can save your shows anywhere on the network. You even get a

USB key for show storage over sneakernet. On us. How cool is that?

PaletteOffline™ runs in Windows and reads and writes Strand 300 and 500 series show files, so you can mix, match and swap to your heart's content. You can even network PaletteOS with existing Strand 300 and 500 series consoles, so no-one gets left behind!
